SUMMARY

Hi, I'm Dmytro, a frontend developer studying at Kharkiv National University of Radio Electronics. I specialize in intuitive web interfaces using the MERN stack, Next.js, and TypeScript. I have experience working in a team and am eager to contribute to innovative projects. Let's create something awesome together!

EXPERIENCE

Full Stack Developer 10/2024 - 11/2024
SoftServe (Apprenticeship) - Space2Study Project remote

I am collaborating with a team on a project that utilizes a modern tech stack, including **React.js**, **TypeScript**, **Node.js**, **MUI**, and **Vitest**. These are the top five technologies I use regularly, demonstrating my proficiency in both front-end and back-end development. I also work with **HTML**, **CSS**, **MongoDB**, **JavaScript**, and **Redux**, ensuring my ability to build scalable and efficient web applications. Additionally, I actively contribute to the project by making **pull requests** and reviewing **code** to maintain quality and collaboration.

PROJECTS

Portfolio Website

Technologies Used:

- Next.js**: For server-side rendering (SSR), static site generation (SSG), and routing.
- Tailwind CSS**: A utility-first CSS framework for fast and responsive design.
- TypeScript**: Adds type safety to JavaScript for better code quality and maintainability.
- Vercel**: Used to host the application with seamless integration for Next.js.

CodePen Clone

However, the project is still **incomplete** and under development. Features such as full user authentication and collaborative code editing are yet to be fully implemented. You can check out the project and its progress on [GitHub](#). Here is a list of the technologies used in my Hangman project:

- React** - For building the user interface.
- Firestore** for backend services, including authentication and database storage.
- Tailwind CSS** for styling, enabling a responsive and modern design.
- JavaScript** for interactive features, allowing users to write, preview, and share HTML, CSS, and JS code in real-time.
